Connecting to your splitty events

The image shows two overlapping browser window screenshots of a web application. The background window is titled 'Starter Page' and has a dark blue theme. It features three main sections: 'Create New Event' with a text input field and a blue 'Create' button; 'Join Event' with a text input field and a grey 'Join' button; and 'Recently viewed events' which lists three events: 'FieldTrip Ex: 0 Pa: 1', 'Dinner Ex: 0 Pa: 0', and 'Pub Ex: 0 Pa: 0'. At the bottom of this window are buttons for 'EN' and 'Admin', and a URL 'http://local...'. The foreground window is also titled 'Starter Page' but has a light grey theme. It mirrors the layout of the background window, with the 'Create' button highlighted in blue. At the bottom of the foreground window, there are buttons for 'EN', 'Admin', 'Delete history', and 'Change Server', along with the URL 'http://localhost:8080/'.

Change Server

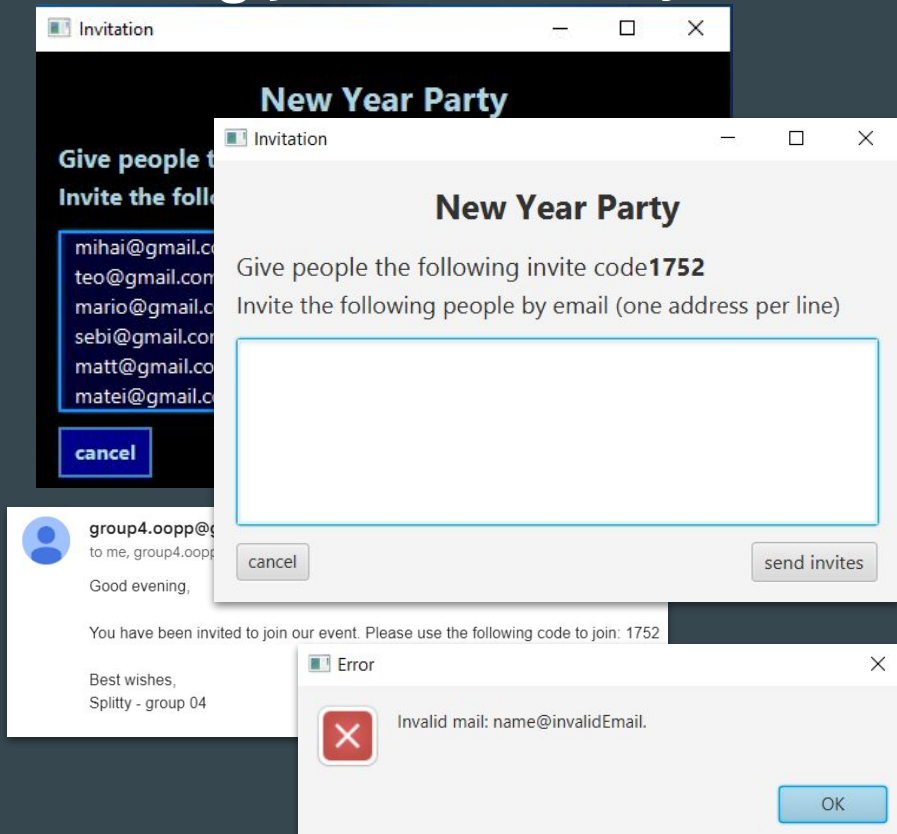

- User can either create a new event for their friends to join or join an existing event using the invite code
- Once a user joins an event it appears in the event history list
- Users can delete events from the history

Setting up an Event

The screenshot shows a web application window titled "Create/Edit Event". The main content area is for an event named "Dinner". At the top, there are buttons for "Edit Title" and "Send Invites". Below this is a section for "Participants" with buttons for "Edit Selected" and "Add". The participants list shows "Matei", "Teo", "Mihai", and "Sebi" in individual boxes, followed by several empty slots. Below the participants is an "Expenses" section with a "Filter:" dropdown set to "All", buttons for "Edit Selected" and "Add", and a large empty box for listing expenses. At the bottom of the window are "Back" and "Settle Debts" buttons. On the left side of the window, there is a sidebar with a "Dinner" header, a "Participants" section showing "Mihai" and "Mario", an "Expenses" section with a "Filter:" dropdown set to "All", and a "Back" button at the bottom.

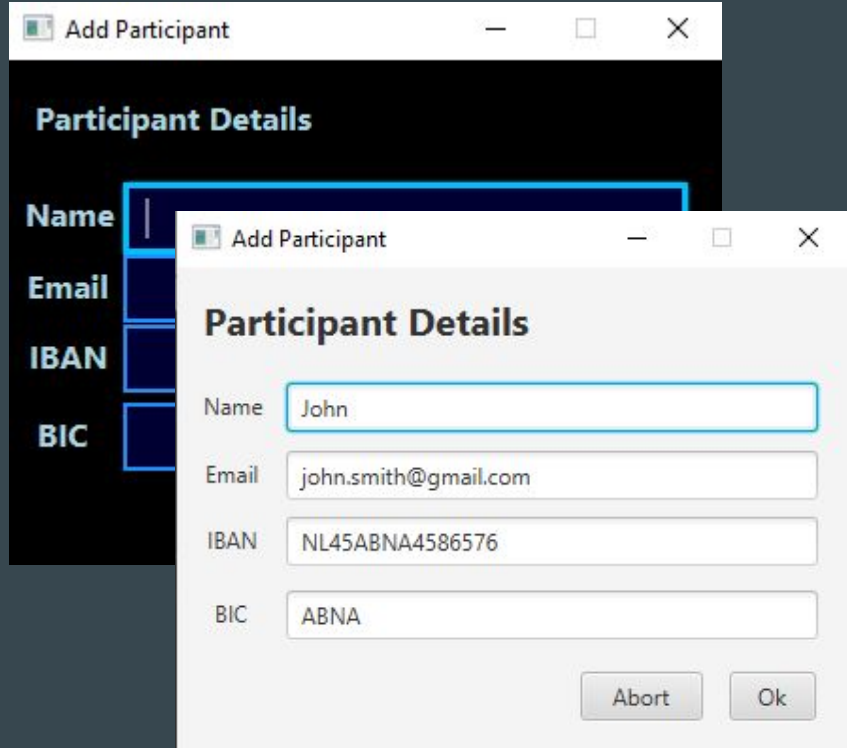

- From the event's overview, you can add/edit/remove participants and their expenses
- Users can also rename the event, get a code to invite others to join the event and see an overview of all debts that participants owe to each other
- Expenses can be filtered based on who paid for them or how recent they are

Inviting your friends to join

- You can always have your friends join your event by giving them the invite or emailing it.
- The text area accepts multiple emails and validates each of them using regex, also pin-pointing the invalid ones
- The emails are sent to the friend's inbox, sent from our email account (group4.oopp@gmail.com) using the Google SMTP
- Your friend can use the received code on the starter page, in the 'Join Event' text box.

Adding/Editing a new participant

The image shows a software interface for adding or editing a participant. It features a dark-themed background with a light-colored dialog box titled 'Add Participant'. The dialog box has a section titled 'Participant Details' with four input fields: 'Name' (containing 'John'), 'Email' (containing 'john.smith@gmail.com'), 'IBAN' (containing 'NL45ABNA4586576'), and 'BIC' (containing 'ABNA'). At the bottom of the dialog are 'Abort' and 'Ok' buttons. In the background, a larger window is partially visible, showing the same 'Add Participant' title bar and a list of labels: 'Name', 'Email', 'IBAN', and 'BIC', each next to a blue rectangular input field.

- From this page, you can add a new participant, providing their name, email, and, optionally, bank account details (IBAN & BIC)
- The page also validates the input and adds the new participant to the event, in real-time
- The page can also pop up with the functionality of editing details, the inputs being already filled with previous information, and replacing the old participant instead of adding a new one.

Creating an Expense

The image shows a 'Create an Expense' dialog box overlaid on a web application interface. The dialog box is titled 'Add Expense' and contains the following fields and options:

- Who paid?** A dropdown menu with 'Teo' selected.
- What for?** A text input field containing 'reservation'.
- How much?** A text input field containing '41.50' and a currency dropdown menu set to 'EUR'.
- When?** A date input field containing '3/6/2024' with a calendar icon.
- How to split?** Two checkboxes: 'With Everyone' (unchecked) and 'Only some people' (checked).
- Split to:** A list of participants with checkboxes: 'Matei' (checked) and 'Teo' (unchecked).
- Type:** A dropdown menu set to 'venue'.
- Buttons:** 'Cancel' and 'Add' buttons at the bottom.

The background application interface shows a form with the following fields:

- Who paid?** A dropdown menu.
- What for?** A text input field.
- How much?** A text input field containing '0.00'.
- When?** A date input field.
- How to split?** Two checkboxes: 'With Everyone' (checked) and 'Only some people' (unchecked).
- Type:** A dropdown menu set to 'other'.
- Buttons:** 'Cancel' and 'Add' buttons.

- For each expense, you can select a participant who paid for it and select between whom should the price be split
- An expense also has a date for filtering, a type of expense specific to an event, and a currency selection

Server Info

- In the admin overview all the events are listed, they can be sorted or deleted
- Admin has also access to import all the event data in the form of JSON file which can be then imported and loaded onto the server

Language selection and Server change

The screenshot shows the 'Create/Edit Event' window of the FieldTrip application. The window has a title bar with standard Windows controls. The main content area is divided into several sections: a header with 'FieldTrip' and buttons for 'Titel Be...' and 'Uitnodigin...'; a 'Deelnemers' section with a 'Bewerk Geselecteerde' button and a 'Toevoegen' button; a table of participants with columns for names and a 'Toevoegen' button; a 'Uitgaven' section with a 'Filter' dropdown set to 'All', a 'Bewerk Geselecteerde' button, and a 'Toevoegen' button; and a bottom section with a 'Terug' button and a 'Schulden Vereffenen' button. The background shows a dark sidebar with 'FieldTrip' and 'Deelnemers' labels, and a 'Filter: All' dropdown.

- The whole application can be translated into English or Dutch using a button in the main menu
- Users can also reconnect to a different server of the app if needed

The screenshot shows a 'Change Server' dialog box. The dialog has a title bar and a main area with a text input field containing 'localhost:8080'. Below the input field are two buttons: 'Cancel' and 'Save'. The background shows a dark sidebar with 'Change Server' and 'localhost:8080' labels, and a 'Cancel' button.

- Splitty has also build-in instant refreshing of all the changes in the events that different users can make simultaneously, so you know that your info is always up to date
- If any changes were not intentional, the user can revert them using the Recent Changes Log option

Possible future extensions and add-ons

- Adding another language for the user to switch would improve accessibility.
- Also, an icon with the respective flag would be a great addition
- Filtering based on different attributes such as price paid (the most relevant expense might be the most expensive) or type of expense
- In the future, the application might also present a statistics window, where the expenses are grouped by the tag and displayed in a chart
